*** Note:** The amounts above are only estimates based on average size projects, and should be used as a guideline. Estimates may vary depending on type of stitch, gauge and differences in individual Crocheters. To calculate the number of skeins/balls/cones needed, divide the total yardage needed for your project by the yardage in each skein of your chosen yarn to be used for the project, this equals the total number of skeins needed. Be sure to round up to the next whole skein/ball/cone. So if you were using Red Heart Super Saver which has 364 yards and you need 1500 yards you would need 5 skeins total.
